

Features

Size and shape of the new coupler paddle:

Note: A Charge Port Adapter (hereafter referred to as "Adapter") must be used when recharging vehicles equipped with the "large" size charge ports.

Size of Charge Port Opening

- Large - Approximately 5 3/8" wide.
- Small - Approximately 4 1/4" wide.

Adapter

Adapters will be distributed to electric vehicle owners by their local Magne Charge™ Sales and Service Representatives.

CAUTION

When charging into a "large" charge port. The adapter must be used with any Magne Charge™ Inductive Charger equipped with the new redesigned coupler paddle. Attempts to charge without the Adapter could cause a misalignment of the paddle resulting in paddle touch temperatures sufficient to cause injury during paddle removal.

Charger Display

Paddle Misalignment

The charger is no longer transferring power to the vehicle because of a paddle misalignment condition.

For large charge ports, verify the following:

- The adapter is being used.
- The coupler paddle is fully inserted into the charge port.
- Recycle the charger's power by replacing the coupler paddle back into the holster until the display goes blank. Reinsert the coupler paddle into the charge port.
- If the problem persists, contact your Magne Charge™ Sales and Service Representative for service.

For small charge ports, verify the following:

- The coupler paddle is fully inserted into the charge port.
- Recycle the charger's power by replacing the coupler paddle back into the holster until the display goes blank. Reinsert the coupler paddle into the charge port.
- If the problem persists, contact your Magne Charge™ Sales and Service Representative for service.
